

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	HOLLYWOOD PRESBYTERIAN MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106190382
Report Period:	1/1/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/25/2025
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://tinyurl.com/2b4essut

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

51022

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	42741	51022	83.8
Spanish Language	5756	51022	11.3
Asian Pacific Islander Languages	1911	51022	3.7
Middle Eastern Languages	354	51022	0.7
American Sign Language	0	51022	0
Other Languages	0	51022	0

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:
<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

176

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

11317

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

1.6

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	3	1.7	3	1.7
Housing Instability	9	5.1	9	5.1
Transportation Problems	11	6.3	11	6.3
Utility Difficulties	1	0.6	1	0.6
Interpersonal Safety	0	0	0	0

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

1267

Total number of respondents to HCAHPS Question 19

1440

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

88

Total number of people surveyed on HCAHPS Question 19

6000

Response rate, or the percentage of people who responded to HCAHPS Question 19

24

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else

Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

1152

Total number of respondents to HCAHPS Question 17

1440

Percentage of respondents who responded "yes" to HCAHPS Question 17

80

Total number of people surveyed on HCAHPS Question 17

6000

Response rate, or the percentage of people who responded to HCAHPS Question 17

24

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

28

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

369

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

75.9

Table 5. Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarean birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

Number of NTSV patients with Cesarean deliveries

270

Total number of nulliparous NTSV patients

1042

Rate of NTSV patients with Cesarean deliveries

0.259

Not disclosed			

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

775

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

2493

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

31.1

Table 9. Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

783

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

5974

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	16.8	18 to 34	6.7	2.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	14.6	18 to 34	6.7	2.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	13.4	18 to 34	6.7	2.0
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	20.3	Hispanic or Latino	10.5	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	14.8	Private	9.5	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth	Male	14.7	Female	10.1	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	15.2	Hispanic or Latino	10.5	1.4
California Maternal Quality Care Collaborative (CMQCC) Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth	Age (for maternal measures only)	30 to 39	0.316	18 to 29	0.2	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	12.6	Private	9.5	1.3
CMQCC Exclusive Breast Milk Feeding	Race and/or Ethnicity	Hispanic or Latino	31.4	White	41.7	1.3

Plan to address disparities identified in the data

We will prioritize three main focus areas over the next year:

- 1.Reducing age- and payer-related readmission disparities among adults 35+
- 2.Reducing racial/ethnic and sex-related readmission disparities
- 3.Improving maternal equity in NTSV cesarean rates and exclusive breast milk feeding

For each focus area, we will define populations, measurable objectives, and specific timelines.

Focus Area 1: Age & payer disparities in readmissions

Population impact: Adults 35 years and older with unplanned 30-day readmissions, especially those insured through Medicare and Medicaid, account for a large share of our total readmissions and resource utilization.

Objectives (by December 31, 2026)

- Reduce readmission rates among adults 50–64 from 16.8% to =15% and among adults 65+ from 14.6% to =13.0%, while maintaining or improving the rate for adults 18–34.
- Reduce the Medicare–Private readmission gap by at least 5%.
- Reduce the Medicaid–Private readmission gap by at least 5%.

Key strategies:

- Implement a standardized high-risk readmission bundle (pharmacy reconciliation, teach-back discharge education, and follow-up appointment scheduled before discharge) for all patients 35+ with priority on Medicare/Medicaid payers.
- Researching vendors to do post-discharge outreach: telephone or virtual follow-up within 72 hours for all high-readmission patients.
- Use risk-stratified care management (e.g., case management and transitional care nurses) to coordinate with primary care, specialists, home health, and SNFs for high-risk patients.
- Monitor readmission metrics monthly, stratified by age and payer, and review outliers in an interdisciplinary quality forum.

Focus Area 2: Racial/ethnic & sex disparities in readmissions

Population impact: Disparities in readmissions for Black/African American, White, and male patients suggest gaps in communication, trust, and care coordination that may reflect broader inequities in access to outpatient care and support.

Objectives (by December 31, 2026)

- Reduce the readmission rate for Black/African American patients from 20.3% to =17.0% and close the rate ratio with Hispanic/Latino patients.
- Reduce the readmission rate for White patients from 15.2% to =12.5%, narrowing the gap with Hispanic/Latino patients.
- Reduce the male–female readmission rate ratio from 1.5 toward =1.2.

Key strategies:

- Apply culturally and linguistically appropriate education in the discharge packet and, including interpreter services and translated discharge materials while patients are admitted.
- Expand community health worker (CHW) or navigator programs to support Black/African American and male patients with follow-up appointments, transportation, and linkages to primary care or specialty care.
- Embed equity-focused case review into readmission and adverse event reviews, explicitly examining race, language, and sex assigned at birth.
- Partner community health worker or navigator programs that serve Black/African American and working-age male populations to improve warm hand-offs and information sharing at discharge.

Focus Area 3: Maternal and newborn equity (NTSV C-section and exclusive breast milk feeding)

Population impact: The elevated NTSV cesarean rate among patients aged 30–39 and the lower exclusive breast milk feeding rate among Hispanic/Latino newborns affect birthing parents and infants at a critical life stage and have long-term health implications.

Objectives (by December 31, 2026)

- Reduce the NTSV cesarean rate for patients aged 30–39 by 10% (from 0.316 toward =0.27), while maintaining maternal and neonatal safety.
- Increase exclusive breast milk feeding among Hispanic/Latino newborns from 37% to =40%, narrowing the gap with White newborns.

Key strategies

- Standardize use of evidence-based labor management guidelines (e.g., ACOG/SMFM) to reduce

non-medically indicated primary cesareans, with real-time physician feedback and peer review.

- Enhance prenatal and intrapartum education for birthing patients aged 30–39 on labor expectations, shared decision-making, and VBAC when clinically appropriate.
- Expand in-person lactation support, Spanish-language education materials, and early postpartum follow-up for Hispanic/Latino families.
- Track maternal measures quarterly by age and race/ethnicity, and review with the Obstetrics department, Nursing leadership, and the Quality Management Committee.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

We are building a culture of person-centered care by aligning our improvement work with the Culturally and Linguistically Appropriate Services (CLAS standards) and involving patients and families in care planning. For populations experiencing higher readmissions (older adults, Medicare/Medicaid, Black/African American, White, and male patients), we are:

- Using teach-back and plain-language instructions at discharge.
- Offering language services and translated materials for patients who prefer languages other than English, especially in maternal and newborn care.
- Incorporating patient and family advisors on quality councils that review readmission and maternal outcome data.
- Feedback integration: HCAHPS surveys data is stratified by race, ethnicity, and language to identify communication gaps.

These actions are designed to ensure that care respects patients' values and preferences and that discharge plans are tailored to each patient's goals and circumstances.

Patient safety

Our readmission-reduction strategies are closely linked to patient safety. Higher readmissions among older adults and publicly insured patients often reflect gaps in safe transitions of care. We are:

- Strengthening medication reconciliation, especially for Medicare patients.
- Standardizing clinical pathways for high-risk conditions (e.g., sepsis, and post-surgical care).
- Partnering with community health workers or navigator programs to offer post-discharge follow-up calls to identify early warning signs and prevent deterioration.
- Reviewing readmission and maternal outcomes in our existing safety and peer-review structures, with additional attention to race/ethnicity, sex assigned at birth, and payer.

Our goal is to reduce avoidable complications that lead to unplanned returns to the hospital.

Addressing patient social drivers of health

Recognizing that many disparities are linked to social and economic conditions, we are expanding our efforts to screen and intervene on health-related social needs (food, housing, transportation, utilities, interpersonal safety) for high-risk groups:

- Embedding SDOH screening into social work consults with priority for patients at high risk.
- Partnering with social work, case management, and community-based organizations to connect patients with food assistance, housing resources, transportation vouchers, and utility support.
- Incorporating SDOH data into our readmission dashboards, enabling us to identify where social needs contribute to disparities and adjust interventions accordingly.

By addressing social drivers, we aim to reduce avoidable readmissions and support more stable recovery after hospitalization.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

To improve effectiveness of care for populations experiencing higher readmissions and maternal disparities, we are:

- Implementing evidence-based clinical pathways for common conditions that drive readmissions, with embedded order sets and decision support in the EHR.
- Providing ongoing education and feedback to physicians and advanced practice providers on variation in readmissions by age, payer, race/ethnicity, and sex assigned at birth.
- Standardizing labor management and breastfeeding support practices across providers and shifts to ensure consistent, high-quality maternal care.

These efforts aim to reduce unwarranted variation in treatment and ensure that all patients receive guideline-concordant, high-quality care.

Care coordination

Care coordination is central to reducing readmissions for older adults, Medicare/Medicaid patients, and racially/ethnically diverse populations. We are:

- Partnering with community health worker (CHW) or navigator programs to provide follow-up appointments with primary care and key specialists before discharge, with appointment reminders and transportation support when needed.
- Strengthening information exchange with community clinics, SNFs, home health agencies, and behavioral health providers.
- Integrating maternal and pediatric care coordination, including lactation follow-up for families at higher risk of poor outcomes.

Our goal is to ensure that patients experience a seamless hand-off from inpatient to outpatient and community care.

Access to care

To address access barriers that contribute to disparities, especially for Medicare/Medicaid patients and Hispanic/Latino families, we are:

- Offering financial counseling and benefits navigation to help patients understand coverage, out-of-pocket costs, and available community resources.
- Ensuring equitable access to perinatal services, including childbirth education, lactation classes at accessible locations and hours.

These actions are intended to ensure that all patients, regardless of insurance, age, race/ethnicity, or language, can obtain the follow-up care needed to recover safely.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)

Y
